

UNIVERSITY OF COLOMBO, SRI LANKA

UNIVERSITY OF COLOMBO SCHOOL OF COMPUTING

BACHELOR OF SCIENCE HONOURS IN COMPUTER SCIENCE

Academic Year 2017/2018 - Second Year Examination - Semester I - 2019

SCS2203 – Software Engineering III
TWO (2) HOURS

To be completed by the candidate	TO AND THE PARTY OF THE PARTY O
Examination Index No:	

Important Instructions to candidates:

- 1. The medium of instruction and questions is **English**.
- 2. If a page or a part of this question paper is not printed, please inform the supervisor immediately.
- 3. Note that questions appear on both sides of the paper.
 - If a page is not printed, please inform the supervisor immediately.
- 4. Write your index number on each and every page of the answer paper.
- 5. This paper has 4 questions and 16 pages.
- Answer ALL questions. All questions carry equal marks
 (25 marks).
- 7. Any electronic device capable of storing and retrieving text including electronic dictionaries and mobile phones are not allowed.
- 8. Non-Programmable/Programmable calculators are not allowed.

(h) When can a Factory pattern	n be used?		[2 Marks]
			,

3. Following is a case study for a Virtual Learning Environment (VLE). In answering the questions below, state clearly the assumptions you make for each part of the question.

Note: The quality tactic frameworks and general scenarios are given separately on the last page. The University of Neverland uses a Virtual Learning Environment to manage their learning contents and control the delivery of learning materials. The administrators can create catalogues and match learners or groups of learners to courses. A user management module allows administrators to control access of users by assigning them specific access roles. Teachers can create assessments, grade them and keep track of their students. Students can collaborate with each other using tools, such as email, wikis, discussion boards, and chats. Students can connect to the VLE from any student computer laboratory when they are on-campus. Students have to use a special VPN (Virtual Private Network) provided by the university to access the VLE when they are off campus.

(b) Select three of the stakeholders that you have identified and name two of the stakeholders that you have identified and name two your have identified and the stakeholders that you have identified and you have identified and you have identif	most important
quality attribute for each of the stakeholders with justifications.	[6 marks]

Portion of Scenario	Possible Values
Source	Human or system that is correctly identified,
	identified incorrectly, of unknown identity who is internal/external, authorized/ not authorized with access to limited resources
Stimulus	Unauthorized person Tries to display data, change/delete data, access system
	services, reduce availability to system services (an attack or an attempt to beak security)
Artifact	System services; data within system
Environment	Either online or offline, connected or disconnected from a network, firewalled or open network
Response	Authenticates user; hides identity of the user; blocks access to data and/or services; allows access to data and/or services; grants or withdraws permission to access data and/or services; records access/modifications or attempts to access/modify data/services by identity; stores data in an unreadable format; recognizes an unexplainable high demand for services, and informs a user or another system, and restricts availability of Services
Response Measure	Time/effort/resources required to circumvent security measures with probability of success; probability of detecting attack; probability of identifying individual responsible for attack or access/modification of data and/or services; percentage of services still available under denial-of-services attack; restore data/services; extent to which data/services damaged and/or legitimate access denied
